BRIAS: Brainstorming on Africa-Related Research

More than 40 Africa researchers from Bayreuth, Ingolstadt, Neu-Ulm, and Würzburg came together for a first workshop of the Bavarian Research Institute of African Studies (BRIAS) in Würzburg. Here they discussed, during one day, their fields of research and talked about possible cooperation projects.

The invitation to participate in this first BRIAS status seminar came from the two BRIAS institutions in Würzburg: the Forum Africa Center (FAZ) and the Excellence Scholarship Program BEBUC. The meeting served as an opportunity for the presentation of the respective fields of research and to find out possible collaboration projects.

On BRIAS and its Institutions

BRIAS was founded in Bayreuth in February 2014. So far, four Bavarian institutions with Africa-related research projects are part of this network under the guidance of its speaker Prof. Dymitr Ibriszimow:

- The University of Bayreuth with its acknowledged academic focus on Africanology and interdisciplinary African studies, with contributions of all six faculties, documented in the Bayreuth International Graduate School of African Studies (BIGSAS) and its more than 100 PhD students, with the Bayreuth Academy of Advanced African Studies (BA) and their associated institutions, like the Iwalewahaus and the Ecological Botanical Gardens, and further successful networks – and with the second-largest stock of Africa-related books and other media in Germany;

- The University of Würzburg with its Forum Africa Center (Forum Afrikazentrum – FAZ), with strong research projects in the field of arts and medical-scientific works in all of its ten faculties, with the Young Africa Center (Junges Afrikazentrum – JAZ), and with the Excellence Scholarship Program BEBUC, which presently supports and accompanies about 180 young academics in the Congo;

- The Neu-Ulm University of Applied Sciences (Hochschule Neu-Ulm – HNU), whose focus on Africa studies lies mainly in the field of health management and whose expertise has now also been extended to the fields of Blended Learning and an education on entrepreneurship based on a practical approach;

- and the Technical University Ingolstadt (Technische Hochschule Ingolstadt - THI), where – at the Institute for new Energy Systems (InES) – path-breaking technologies for renewable energy systems are elaborated and promoted. THI maintains intense scientific relations in particular with the southern part of Africa.

BRIAS is a multi-disciplinary platform. Its aim is the interlinking of the existing academic competence within Bavarian Africa-related research, the sustainable reinforcement of university cooperation with partners in Africa, the creation of new teaching modules, and
About the Workshop

In order to concentrate and coordinate these fields of work and expertise, and to attain new collaborations and networks, the participating academics presented themselves in a one-day marathon of talks. At this first meeting on Africa research in Bavaria, long lectures were deliberately avoided. More important were discussions, both, in the plenary and in smaller groups. The personal contacts were meant to achieve that questions on Africa should be seen in a multi-disciplinary way, in order to better take into account the complexity of the African continent. With 19 out of 32 talks, there was of course an especially strong participation by the hosts from Würzburg.

The meeting had been organized and planned by Prof. Gerhard Bringmann from the Würzburg Chair of Organic Chemistry I (at the same time member of the FAZ Board and Chairman of BEBUC) together with Julien Bobineau (Young Africa Center), Prof. Horst Beinlich (Egyptology), and Prof. Heiko Paeth (FAZ Speaker).

In his opening speech, Bringmann emphasized the importance of this first status seminar as a unique chance to come to know each other and to profit from the diversity. Alfred Forchel, President of the University of Würzburg, thanked Bringmann for initiating the status seminar. "From this event, which provides a promising further basis for the successful collaboration of the Bavarian Africa initiatives, I expect new synergistic effects," he added. The Speaker of BRIAS, Dymitr Ibrisizimow likewise thanked the organizers and added: "Partners have become friends and partnerships have developed into friendships. BRIAS offers a perfect framework for the inner-Bavarian exchange and for research cooperations focused on Africa."

Plans for the future

"As a result of the exchange of knowledge and experience, there will be first clues on collaboration projects, now serving as a starting point for future joint activities – BRIAS grows together!", says Bringmann.

In his closing remarks FAZ Speaker Heiko Paeth expressed the hope that, in the future, similar meetings might take place regularly in alternating places.
